(54) Title: A METHOD FOR ACCESSING AND DISPLAYING DYNAMIC DATA IN WEB APPLICATION

(57) Abstract: A method is provided for accessing and displaying dynamic data from diverse data sources in web applications. The method includes a platform that supports web page generation by mixing HTML (HyperText Markup Language) with xml-like tags capable of encapsulating programming logic, a set of Interfaces, and a set of tags that facilitates the use of the aforesaid set of Interfaces. The benefit of using such a method is that it offers simpler presentation code, and better separation of programming logic from page design.
